2. Client Brief

Client wants to develop a social media web application tailored particularly for the real estate community.

Brief:- I am excited to share that we are planning to launch a new venture focused on creating a community platform for the real estate industry, akin to Instagram. The platform will serve as a hub for users and professionals involved in any aspect of real estate, such as architects, contractors, builders, material providers, service providers, and more. Here are the key features of the platform: 1.User Verification: We will verify all professionals to ensure credibility and quality within our community. This will include individuals dealing with any aspect of real estate. 2. Portfolio Creation: Users will be able to create portfolios of their assets and properties. These portfolios will be encrypted and accessible only to the user. 3. Project, Product, and Service Management: Verified users will have the ability to post and manage their projects, products, and services on the platform. 4. Community Engagement: Our aim is to foster a thriving community where users can connect, collaborate, and share insights related to real estate. 5. City Data and Insights: We will provide comprehensive data for the cities users are searching in. Starting with 3-4 third-tier cities such as Sri Ganganagar, Sirsa, Bhatinda, and Sikar, each city's page will offer insights and data, including city layouts, master plans, and real estate news. Users will be able to connect with anyone in the city who is registered on our platform.

4. Scope of Work

Deliverables for the Web Application

◆ Page Template

- Custom Web 2.0 Standard Design Responsive Templates
- User visibility research and layout engineering
- Organization Logo

◆ Template Layout

- Banner
- Size according to specifications
- Logo placement
- ◆ Text
- Graphics

• User Visibility Content

- Information bar
- Tool bar
- Side Bar
- Header and Footer
- Text and Graphics

Design Specifications

Design tools and technologies

The design and layout of the website will be SEO friendly. It will be constructed using CSS, HTML5, XHTML, DHTML and Bootstrap along with use of AJAX keeping in mind the latest web 2.0 trends.

The website upon completion will be integrated with Google data analytics for keeping an eye on the statistics of the site. It will also carry Refer a friend and printer friendly version at all pages. To help people bookmark the site easily; add this widget will be embedded at the top of the homepage.

Front End

The front end will have the following features:-

- **♦** Web Application Content Screen For Users
 - Splash Screen
 - Walk through Screens
 - Sign Up/Create your account

For individual

- Create a unique username
- Enter your first name
- Enter your last name
- o Enter email
- o Enter mobile number
- o Generate verification link over the phone number/email
- Verify link/Confirm link
- o Continue (Users account will be created and user will receive the confirmation over the mail address for successful account creation)

o For business

Create a unique username

- Select business type from the list of available options
- Business name
 - Owner name
 - First name
 - Last name
- Select business category
 - Select subcategory
- Business address
 - Pin your business location on Google map (Google maps API required from the client)
 - Select country
 - Enter your city
 - Enter your province
 - Enter your zip code
- o Enter your phone number/email address
- Enter years of experience
- Upload verification documents
- o Generate verification link over the phone number/email
- o Create password
- Verify link/Confirm link
- Continue (business account creation request will be sent to the admin and until admin approval, the account will not be created)
- o e-KYC verification (aadhar KYC API required from the client)
- After Signing Up
 - Set profile picture
 - o Do you wish to make your profile private?
 - If yes
 - Your profile posts and portfolio will not be visible to the people that do not follow you on the web app
 - Select purpose of your visit
 - Select one from the available options

Page 8 of 55

- Select the categories you are interested in
 - List of categories
 - Select multiple (at least 5)
 - Proceed
- Sync your contacts (this feature can only be available on mobile application)
 - Allow the app to access contacts data from the device
 - Show suggestions of people on the app you may know from your contacts
- Enable two-step verification (using biometric security) (this feature can only be available on mobile application)
 - Allow app to access device's biometric data
 - Face ID (for iPhone)
 - Fingerprint (for Android)
- Social Sign Up
 - Google
 - Facebook

The social signed-up users will be by-default individual users but can later be converted to business profile

- Sign In
 - o Enter registered email address or your username
 - Enter password

Or

- o Enter mobile number
- Enter OTP

Or

- Use Google/Facebook account to sign in
- Forgot password
 - Enter registered email
 - Visit the password reset link received in the email
 - Reset password

Shreshth Agarwal

Page 9 of 55

- Enter new password
- Confirm password
 - Submit
 - Password changed successfully
- App Tour (this feature can only be available on mobile app)
 - Dynamic app tour highlighting the app's features depending on the user type using the app
- Guest User
 - Can only view nearby social media posts, share links of the posts, view profiles of each type of users and share their profile links
 - Can not open PDFs uploaded by another user to their portfolio. Can not like/comment/report on a post. Can not follow any other user. Can not view followers or followings of other users
- Individual User
 - Set up portfolio
 - Add a new asset
 - Enter the property name
 - Select the property type
 - Location
 - Pin location on Google maps (Google maps API required from the client)
 - Enter the location (locality, city, state, PIN code, country etc.)
 - Enter the area of the property
 - Enter description of the property
 - Upload multimedia
 - Upload images and videos
 - Confirm posting
 - Upload documents
 - Upload required property documents

Page 10 of 55

- Property value
 - Enter the purchase price
 - Enter the current market price
- Add more assets by repeating the above method
- My Portfolio
 - o List of all the assets added by me
 - View asset details
 - View P/L percentage and amount on your assets as per the current market rate
 - Edit an asset
 - Add new asset
- Business User
 - Set up property portfolio
 - o Create a folder
 - Enter the name of the folder (the folder name could be the society's name)
 - Create a property listing inside a folder
 - Basic details
 - Property Title: A concise, descriptive title (e.g., "Spacious
 3-Bedroom Apartment in Downtown")
 - Property Type: Options like house, apartment, condo, townhouse, commercial property, land, etc.
 - Listing Type: For sale, for rent, or lease
 - Location Details
 - Address: Full street address
 - City: City or town name
 - State/Province: State or province
 - ZIP/Postal Code: ZIP or postal code
 - Country: Country
 - Property Details
 - Square Footage: Total area in square feet or meters

Page 11 of 55

- Number of Bedrooms: Total number of bedrooms
- Number of Bathrooms: Total number of bathrooms
- Number of Floors: Total number of floors
- Year Built: The year the property was constructed
- Lot Size: Total land area in acres or square feet/meters

Interior Features

- Flooring Type: Hardwood, carpet, tile, etc.
- Heating/Cooling: Types of heating and cooling systems
- Kitchen Features: Appliances included, counter-tops, cabinetry
- Laundry: Laundry facilities and type (e.g., in-unit, shared, washer/dryer included)
- Additional Rooms: Home office, basement, attic, etc.

Exterior Features

- Exterior Materials: Brick, siding, stucco, etc.
- Roof Type: Type of roofing material
- Parking: Garage (number of cars), carport, street parking, etc.
- Yard: Description of the yard or garden space
- Fencing: Type and extent of fencing around the property

Amenities and Special Features

- Pool: Type of pool (if any)
- Gym: Onsite gym or nearby fitness facilities
- Security: Security systems, gated community, etc.
- Accessibility Features: Features like wheelchair ramps, elevators, etc.

Nearby Facilities

- Schools: Proximity to schools and their ratings
- Public Transport: Nearest public transport options
- Shopping and Dining: Nearby shopping centers, restaurants, and cafes

Shreshth Agarwal

 - Community
- Privacy Policy
- Terms and Conditions
- Delete Account
 - Enter password
 - Confirm deletion
- Log Out

◆ Functions of Users

- The web app begins with a splash screen, followed by a series of walkthrough screens to guide new users through its features. To create an account, users can sign up as either individuals or businesses. For individual accounts, users need to create their unique username, enter their first and last names, email, and mobile number. They then generate a verification link sent to their phone number or email, which must be verified to complete the account creation. Once verified, users receive a confirmation email.
- For business accounts, users select their business type from options available. They then create their unique username, provide the business name (if applicable), owner name, business address including location pin on google maps fetching the exact longitudes and latitudes of the business facility, country, city, province, and zip code, contact details, years of experience, and upload a verification document. A verification link is generated and must be confirmed via phone number or email. After setting a password and verifying the link, the business account creation request is sent to the admin for approval, during which the account remains inactive. Additionally, business users will need to go through an e-KYC which will be completed using aadhar KYC API provided by the client.
- After signing up, users are guided through a quick setup process to personalize their experience. First, they are prompted to set a profile picture by either uploading an image or choosing from predefined avatars. Next, they can choose to make their profile private, ensuring that only their followers can see their posts and portfolio. Users then select the primary purpose of their visit from options like networking, learning, or sharing knowledge. Finally, they choose at least five categories of interest from a diverse list, tailoring the content they will see in the web app.
- For signing in, users can enter their registered email or their unique username and password, mobile number and OTP, or use their Google/Facebook account. If a user forgets their password, they can reset it by entering their registered email, visiting

Shreshth Agarwal

- the password reset link received in their email, and setting a new password. The process ensures that the password is changed successfully.
- Guest users have limited access; they can view nearby social media posts, share links to these posts, and view and share profiles of other users. However, guest users cannot open PDFs uploaded to other users' portfolios, nor can they like, comment on, or report posts. Additionally, they cannot follow other users or view the followers and followings of other users. This setup allows guests to explore the web app's basic functionalities while encouraging them to sign up for full access.
- The web app offers a range of features tailored to different types of users, including individual users and various types of business users such as realtors, developers, service providers, and building materials providers/stores.
- For individual users, the web app allows setting up a portfolio where they can add new assets. Users can enter the property name, select the property type, and provide detailed location information, including pinning the location on Google Maps. They can specify the property area, write a description, and upload multimedia content such as images and videos. Additionally, users can upload required property documents and enter both the purchase price and the current market price of the property. After confirming the post, users can view and manage all their assets through the "My Portfolio" section, where they can view asset details, see the profit/loss percentage and amount based on the current market rate, edit existing assets, or add new ones by repeating the process.
- For business users, the web app offers robust features to manage property portfolios, work projects, and store products. Users can create folders for property listings, enter detailed property information including title, type, location, and amenities, and upload multimedia content and documents. The "My Portfolio" section allows users to view, edit, and manage all property listings. Additionally, users can set up a work portfolio by creating projects with detailed descriptions, multimedia content, technical details, and budget information. The "My Work Portfolio" section provides an overview and management tools for all projects. For managing a store, users can

Shreshth Agarwal
Page 26 of 55

upload products with detailed descriptions, specifications, pricing, and multimedia, and manage their store inventory through the "My Store Products" section.

- The web app also includes robust social media features for users to upload and share content on their feed. Users can upload stories directly from their device storage. For videos, there are specific conditions: each video must be no longer than three minutes, in mp4 format, and not exceed 100 MB in size. The web app does not offer an editor for video content, so users must prepare their videos before uploading.
- For normal posts, users can upload only text up to 500 characters or upload it with up to 10 images, videos, or a combination of both, with each video adhering to the same length and size restrictions. Users can select multiple categories for their post and enter relevant tags. Additionally, users can link their post to an asset, property, product, or project from their portfolio by selecting the appropriate item. This integration enhances the visibility and connection of their uploaded content with their existing portfolio.
- The web app provides a feature to promote posts, allowing users to increase visibility and engagement. Users can view the benefits of promoting a post, such as having their posts appear at the top of the feed for users whose location and interests match the post's category and tags. They can select a post to promote, choose a promotion duration (a week, fortnight, or month), and make a payment via a payment gateway. The "My Promoted Posts" section displays all promoted posts with details such as promotion start and end dates. Users can renew promotions by making additional payments and track engagement metrics including reach, likes, followers gained, comments, shares, and the location of the most engagement.
- The web app also includes a feature for posting and viewing stories, which expire 24 hours after being posted. Users can view stories from other profiles, allowing for more dynamic and timely content sharing and interaction within the community. This feature enhances user engagement by providing a platform for short-term updates and highlights.

Shreshth Agarwal

Page 27 of 55

- When viewing an individual user's profile, users can see the following basic details: name, profile picture, and contact information. The profile also includes a list of posts made by the user and a portfolio showcasing their uploaded assets. Users have the option to follow or unfollow the profile, see the number of followers and followings, and send a message, which sends a message request to the user's chats. Additionally, users can share the profile with others or report it by selecting a reason and submitting it to the admin for review.
- The web app includes extensive features for exploring nearby businesses and professionals:
- The web app's "Explore Nearby Businesses" feature allows users to discover business users in their vicinity. Users can search for businesses, filter results by category, and view detailed profiles, including business name, category, profile picture, and contact information. The profile also displays the business's posts, property portfolio, work portfolio, and store products. Users can follow or unfollow businesses, view follower and following counts, send messages, and express interest by providing contact details and a note. Additionally, users can view average ratings, read feedback from others, leave their own ratings and feedback, share profiles, and report any issues to the admin.
- The web app's "Community" feature allows business profiles to create and manage communities. Users can enter a community title, select a category, provide a description, and upload a display picture. They can choose the security type: public (anyone can join and view members/posts but can't chat without joining) or private (membership requires approval). After saving, users can invite others by sharing the community link. The platform lists all communities, allowing users to search by name, category, or keywords and filter by category. Community pages display details such as title, display picture, category, description, and member count. Users can join communities, view and create posts, engage with posts through likes, comments, reports, and shares, and participate in community chats. For posts linked to assets/properties/products/projects, users can view detailed screens and the post owner's profile. The "My Communities" section lists joined and owned communities,

Shreshth Agarwal Page 28 of 55

providing options to view posts, members, chat, edit details, manage members, handle join requests, delete communities, and transfer ownership.

- The web app offers a diverse range of features to enhance user engagement and provide valuable information:
- Blogs: Users can explore a list of blogs posted by others nearby, search by title, tags, or keywords, and filter by categories. When viewing a blog, users can see textual content and images, along with the blog's location and comments by other users. Users can add their comments, report the blog if necessary, and submit a reason for reporting to the admin. Additionally, users can create their own blogs by entering a title, uploading images, selecting categories and tags, optionally specifying a location, providing a description, and submitting the blog. The "My Blogs" section allows users to manage their uploaded blogs, including adding new ones or deleting existing ones.
- City Data and Insights: Users can access insights and data related to emerging real estate in various cities. The web app provides a list of cities for which data is available, allowing users to select a city and view relevant information uploaded by the admin.
- Daily News: The web app integrates with a third-party API to fetch news related to real estate. Users can browse a list of news articles and view details of each article as fetched from the API.
- The web app's chat feature facilitates communication between users, offering convenient ways to manage conversations:
- All Chats: Users can access a list of all their chats, displaying the names of the individuals messages were sent to or received from. This section serves as a central hub for managing ongoing conversations, allowing users to easily navigate and engage with their messages.
- Requests: In the requests section, users can view a list of chat requests they've received. For each request, users have the option to accept or reject it. Accepting a

Shreshth Agarwal Page 29 of 55

request initiates a chat with the sender, enabling seamless communication between users within the web app's messaging system.

- The web app allows users to manage multiple profiles seamlessly with the "Create a New Profile" and "Switch Profile" features. When creating a new profile, users can choose a unique username and select the profile type (individual or business), filling out the required form accordingly. The "Switch Profile" function provides a list of profiles associated with the user's account, enabling users to select the desired profile and continue using the web app with that identity. This functionality facilitates tailored experiences for different purposes or roles within the web app.
- The "My Account" section provides users with tools to manage their profile and account settings effectively:
- Edit My Profile: Users can modify their profile information, such as name, contact details, and profile picture, ensuring their profile remains up-to-date and accurate.
- Change Password: Users have the option to change their account password for added security. They can enter a new password and confirm it to complete the change. Upon successful password modification, users receive a notification via email confirming the update.
- My Posts: This section displays a list of posts created by the user. Users can view details of each post and remove any posts they no longer wish to have on their profile.
- My Followings: Users can view a list of profiles they currently follow. For each profile, users have the option to view the profile, unfollow, send a message, or report it if necessary.
- My Followers: This section lists profiles that follow the user. Users can view each
 follower's profile, choose to follow back, remove followers, send messages, or
 report any concerning activity.
- The web app provides business users with tools to monitor their online presence and engagement through features such as "My Rating", "Leads", "Content Guidelines",

Shreshth Agarwal
Page 30 of 55

and "Notification Center". In "My Rating", users can view their average rating on the platform along with feedback comments and ratings received from other users. The "Leads" feature displays profiles that follow the user, along with engagement metrics on posts such as reach, likes, followers gained, comments, shares, and top locations of engagement. "Content Guidelines" outlines permitted content types on the platform, ensuring compliance with community standards.

- The "Notification Center" categorizes received notifications into business-related, social, new message requests, and community updates, providing users with a centralized hub for staying informed about platform activities.
- The web app prioritizes user privacy and legal compliance, offering essential functionalities and options:
- Privacy Policy: The web app provides access to its privacy policy, outlining how user data is collected, stored, and utilized within the platform, ensuring transparency and user trust.
- Terms and Conditions: Users can review and agree to the web app's terms and conditions, which govern the usage of the platform, outlining rights, responsibilities, and acceptable use policies.
- Delete Account: Users have the option to permanently delete their account. To initiate this process, users must enter their password and confirm the deletion. This action ensures users have control over their data and account presence within the web app.
- Log Out: Users can securely log out of their account, terminating their current session to protect privacy and ensure account security.

NOTE: If any functionality requires **THIRD** party **API** it will be provided by client and Promatics will integrate it into the project.

5. Administrative Panel

The back end of the web application will be power packed with an administrative panel to manage the updating of data at the front as well as the back end. Following are the key functionalities:

- **♦** Individual Users Management
- **♦** Business Users Management
- **♦** Categories Management
- **♦** Chat Management
- **♦** Social Media Management
- **♦ Promoted Posts Management**
- **♦** Community Management
- **♦** General Management
- **♦** Content Management
- **♦** Reports Management

Shreshth Agarwal

Page 32 of 55

♦ Individual Users Management

- Admin will be able to manage the individual users on the system.
- O Admin will be able to search the list of all individual users on the system.
- Admin will be able to add/remove the individual users from the system.l
- Admin will be able to view the portfolio posted by the individual users in the system from the admin panel.

Business Users Management

- O Admin will be able to manage the business users on the system.
- o Admin will be able to search the list of all business users on the system.
- o Admin will be able to approve business profiles on the system.
- O Admin will be able to view the e-KYC status of the business profile on the system.
- o Admin will be able to filter the business profiles by type on the system.
- o Admin will be able to add/remove the business users from the system.
- Admin will be able to view the portfolio posted by the business users in the system from the admin panel.

♦ Chats Management

- Admin will be able to view the list of all chats in the system from the admin panel.
- Admin will be able to add/remove the chats in the system from the admin panel.
- o Admin will be able to search specific chats in the system from the admin panel.
- Admin will be able to manage the chats in the system from the admin panel.

Categories Management

 Admin will be able to manage the property types, product brands, product categories/subcategories, and service types on the admin panel.

Shreshth Agarwal
Page 33 of 55

Admin will be able to remove or add new property types, product brands,
 product categories/subcategories, and service types from the admin panel.

♦ Social Media Management

- Admin will be able to manage the posts made by users in the system from the admin panel.
- Admin will be able to view the list of all the posts and the interactions like,
 comments, like, and reports received on the posts in the system from the admin panel.
- Admin will be able to search the posts from list of products in the system from the admin panel.
- Admin will be able to remove the posts or comments on them in the system from the admin panel.
- Admin will be able to approve posts to get live on the web app from the admin panel.

Promoted Posts Management

- O Admin will be able to manage the posts promoted by the users from the admin panel.
- O Admin will be able to view the promotion duration of each post on the admin panel.
- Admin will be able to manually promote a post for a certain duration on the admin panel.
- O Admin will be able to view the total revenue generated from the promotions on the admin panel.
- O Admin will be able to search and filter promoted posts by the users' names on the admin panel.

Shreshth Agarwal

Page 34 of 55

♦ Community Management

- o Admin will be able to manage the communities created by the users from the admin panel.
- Admin will be able to view and search all the communities on the platform from the admin panel.
- O Admin will be able to view the community members and have the power to remove any community member from the admin panel.
- o Admin will be able to view all the community posts from the admin panel.
- o Admin will be able to remove any community posts from the admin panel.
- Admin will be able to delete any community from the admin panel.

♦ General Management

- Manage Terms and conditions
- Manage Privacy Policy
- Manage Contact Us

♦ Content Management

Admin will be able to show/hide selected items in the system. The admin will be provided a rich interface editor which will enable him to edit the content in English and Finnish languages on the system.

♦ Reports Management

Admin will be able to generate reports in a printable format for the following:

- List of Individual Users
- List of Business Users
- List of Categories

The admin will be able to apply filters date wise, name wise.

Shreshth Agarwal

Page 35 of 55

The admin will be able to export the reports in other formats like excel, csv.

NOTE: If any functionality requires a THIRD party **API** it will be provided by client and Promatics will integrate it into the project.

Shreshth Agarwal

6. Standardizations

Testing Standards

We make sure each of our services undergoes rigorous testing so that it becomes 100% free of bugs. All the standard methods of white and black box testing are in place to achieve this feat. We:

- Prepare the test cases based on design and functionality.
- Ensure a cosmetic bug test before delivery.
- Test the embedded links exhaustively to make sure no errors are there.
- Validate all Web Applications.
- Implementing Cascading Style Sheets (CSS) for each of the Web Application.
- All code will be compliant to W3C.
- Test the Web Application on different OS versions.
- Test the Web Application on different screen sizes and resolutions.
- Perform all security functional and logical testing.

Delivery Standards

Promatics would promise to deliver the final project in the following ways:

- Directly hosting on to servers mentioned by Client and deploys the web application and database.
- A document briefing all details of the files and Database structure will be released after the final payment.
- Deliver the complete source code along with the database structure scripts via Gitlab/Github or any other cloud storage application.
- All copyrights to the web application will be held by Client.

promatics

Technology & Performance 7.

Technology Stack

Web App/Web Admin Panel:

React/Next.js, ECMAScript 11, BootStrap4 and Materialize for modern responsive front-end

framework based on Material Design Redis.

Web Services/ RESTFul APIs:

Node 14.17.1, Express 4.17.1 (Node JS Framework focuses on high performance and Robust

routing), and JSON for RestFul APIs/ WebServices, Socket.io 3.1.1 for real-time

bidirectional event-based communication, Redis 6.2.0 (used as a data structure server and for

cache since it's super fast due to the fact that the data is stored "in-memory") for faster

retrieval of data from database.

Database: MongoDB

For Push Notifications: Firebase SDK

For Email Notifications: G-Suite SMTP

Web Server: Apache 2 for deployment

Proposed SMS Gateway: Text Local

Proposed Payment Gateway: Razorpay

For e-KYC: Aadhar KYC API

For location pinning: Google Maps API

Proposed Cloud Server for going live: Amazon Web Services with SSL

Security Stack

Blowfish (bcrypt)

SHA1

MD5

Shreshth Agarwal

Page 38 of 55

- Firewall Protection for Cross Origin
- Proxy Pass, SSL and TLS
- ◆ HTTP 2.0
- Token authentication using Passport/JW

NOTE: To verify that the posts posted by the users are related to real estate business, the posts will first go through a manual admin verification process before getting published live on the web app.

Reasons for choosing the above technology stack

We are obliged to deliver you high performance web applications that are functionally excellent and carry immersive user experience. The above listed tools provide us the resources to do that. These technologies are used by tech giants and have time and again proved their mettle. They power unicorns and are responsible for almost all successful and popular web applications you use and know. They are secure, reliable as well as cost effective in building cutting edge web applications which are second to none.

Regarding Post Project Support

Promatics shall give a warranty for all its code, provided a third party does not alter the same. Any bugs shall be addressed absolutely free of cost until it does not involve adding new modules that will be billable. Warranty Web Application for **THREE Months** from the date of completion of the project shall be valid only after clearance of full and final payment of the project.

8. Delivery Schedule

Modules	Weeks	Key Deliverables		
1	0-2	Knowledge transfer, Working on the layout, Working on the		
		functional requirements, Locking in the database design,,		
		Workings on Specific requirements.		
2	2-5	Development of web app content for Users: Splash Screen, Walk		
		through Screens, Sign Up/Create your account, For individual,		
		Create a unique username, Enter your first name, Enter your last		
		name, Enter email, Enter mobile number, Generate verification		
		link over the phone number/email, Verify link/Confirm link,		
		Continue (Users account will be created and user will receive the		
		confirmation over the mail address for successful account		
		creation), For business, Create a unique username, Select business		
		type from the list of available options, Business name, Owner		
		name, First name, Last name, Select business category, Select		
		subcategory, Business address, Pin your business location on		
		Google map (Google maps API required from the client), Select		
		country, Enter your city , Enter your province, Enter your zip		
		code, Enter your phone number/email address, Enter years of		
		experience, Upload verification documents, Generate verification		
		link over the phone number/email, Create password, Verify		
		link/Confirm link, Continue (business account creation request		
		will be sent to the admin and until admin approval, the account		
		will not be created), e-KYC verification (aadhar KYC API		
		required from the client), After Signing Up, Set profile picture, Do		
		you wish to make your profile private?, If yes, Your profile posts		
		and portfolio will not be visible to the people that do not follow		
		you on the web app, Select purpose of your visit, Select one from		
		the available options, Select the categories you are interested in,		

Shreshth Agarwal Page 40 of 55

List of categories, Select multiple (at least 5), Proceed, Sync your contacts (this feature can only be available on mobile application), Allow the app to access contacts data from the device, Show suggestions of people on the app you may know from your contacts, Enable two-step verification (using biometric security) (this feature can only be available on mobile application), Allow app to access device's biometric data, Face ID (for iPhone), Fingerprint (for Android), Social Sign Up, Google, Facebook, The social signed-up users will be by-default individual users but can later be converted to business profile, Sign In, Enter registered email address or your username, Enter password, Or, Enter mobile number, Enter OTP, Or, Use Google/Facebook account to sign in, Forgot password, Enter registered email, Visit the password reset link received in the email, Reset password, Enter new password, Confirm password, Submit, Password changed successfully, App Tour (this feature can only be available on mobile app), Dynamic app tour highlighting the app's features depending on the user type using the app, Guest User, Can only view nearby social media posts, share links of the posts, view profiles of each type of users and share their profile links, Can not open PDFs uploaded by another user to their portfolio. Can not like/comment/report on a post. Can not follow any other user. Can not view followers or followings of other users, Individual User, Set up portfolio, Add a new asset, Enter the property name, Select the property type, Location, Pin location on Google maps (Google maps API required from the client), Enter the location (locality, city, state, PIN code, country etc.), Enter the area of the property, Enter description of the property, Upload multimedia, Upload images and videos, Confirm posting, Upload documents, Upload required property documents, Property value, Enter the purchase price, Enter the current market price, Add more assets by repeating the

Shreshth Agarwal
Page 41 of 55

assets as per the current market rate, Edit an asset, Add new asset with corresponding admin panel. 5-10 Development of web app content for Users: Business User, Set up property portfolio, Create a folder, Enter the name of the folder (the folder name could be the society's name), Create a property listing inside a folder, Basic details, Property Title: A concise, descriptive title (e.g., "Spacious 3-Bedroom Apartment in Downtown"), Property Type: Options like house, apartment, condo, townhouse, commercial property, land, etc., Listing Type: For sale, for rent, or lease, Location Details, Address: Full street address, City: City or town name, State/Province: State or province, ZIP/Postal Code: ZIP or postal code, Country: Country, Property Details, Square Footage: Total area in square feet or meters, Number of Bedrooms: Total number of bedrooms, Number of Floors: Total number of floors, Year Built: The year the property was constructed, Lot Size: Total land area in acres or square feet/meters, Interior Features, Flooring Type: Hardwood, carpet, tile, etc., Heating/Cooling: Types of heating and cooling systems, Kitchen Features: Appliances included, counter-tops, cabinetry, Laundry: Laundry facilities and type (e.g., in-unit, shared, washer/dryer included), Additional Rooms: Home office, basement, attic, etc., Exterior Features, Exterior Materials: Brick, siding, stucco, etc., Roof Type: Type of roofing material, Parking: Garage (number of cars), carport, street parking, etc., Yard: Description of the yard or garden space, Fencing: Type and extent of fencing around the property, Amenities and Special Features, Pool: Type of pool (if any), Gym: Onsite gym or nearby fitness			above method, My Portfolio, List of all the assets added by me,		
with corresponding admin panel. 5-10 Development of web app content for Users: Business User, Set up property portfolio, Create a folder, Enter the name of the folder (the folder name could be the society's name), Create a property listing inside a folder, Basic details, Property Title: A concise, descriptive title (e.g., "Spacious 3-Bedroom Apartment in Downtown"), Property Type: Options like house, apartment, condo, townhouse, commercial property, land, etc., Listing Type: For sale, for rent, or lease, Location Details, Address: Full street address, City: City or town name, State/Province: State or province, ZIP/Postal Code: ZIP or postal code, Country: Country, Property Details, Square Footage: Total area in square fect or meters, Number of Bedrooms: Total number of bedrooms, Number of Bathrooms: Total number of bathrooms, Number of Floors: Total number of floors, Year Built: The year the property was constructed, Lot Size: Total land area in acres or square feet/meters, Interior Features, Flooring Type: Hardwood, carpet, tile, etc., Heating/Cooling: Types of heating and cooling systems, Kitchen Features: Appliances included, counter-tops, cabinetry, Laundry: Laundry facilities and type (e.g., in-unit, shared, washer/dryer included), Additional Rooms: Home office, basement, attic, etc., Exterior Features, Exterior Materials: Brick, siding, stucco, etc., Roof Type: Type of roofing material, Parking: Garage (number of cars), carport, street parking, etc., Yard: Description of the yard or garden space, Fencing: Type and extent of fencing around the property, Amenities and Special Features, Pool: Type of pool (if any), Gym: Onsite gym or nearby fitness			View asset details, View P/L percentage and amount on your

9. Agile Process Flow

10. Requirements from Client

Promatics would require the following from **Client**. This information would be solely used for the project purpose.

- Detailed document in case any more features need to be added on the web application.
- Point of contact to discuss the updates on a daily or a weekly basis as preferred by Client.
- Any proprietary images, content and any other assets that are require for the development of the web application.

Top

11. Promatics' Commitment

Promatics' deliverables catering to web application design & development space are as follows:

- Fully functional site with the aforementioned deliverables.
- ETA of the project would be **16 weeks**. Further changes in the deliverables may extend or reduce the ETA.
- Promatics works on a strict schedule and promises to deliver as per the agreed time frame. However, we take a standard deviation of 10% due to force majeure.

Top

12. Location of Work

The complete development process will be carried out of the development center of **Promatics** in Ludhiana, INDIA. The center is situated in Punjab, North India which is the one of the most prosperous state of INDIA.

13. Progress Reporting and Communication

We will be available for conference with you anytime and you can reach us to discuss regarding the project through any means apart from this we will be giving a formal weekly report on the progress of the project and the status via e-mail.

Shreshth Agarwal
Page 50 of 55

<u>Top</u>

14. Engagement Model

Promatics has a GLOCAL engagement model that helps derive maximum value for our Clients and provide maximum return on their investments. The Engagement Model formulated **Client** is as follows:

|| Intellectual Property ||

Promatics guarantees high level of protection of information and intellectual property of its Clients and ensures a zero information leakage mechanism. This is also a part of our ISO and CMMi certification (Undergoing) process.

|| Software Ownership ||

Client would own the copyright on the web application / service developed as a whole. Copyright ship is valid only after the full payments have been made and **Promatics** hands over a copyright release document to **Client**.

|| Systems & Processes ||

Promatics has highly evolved systems and processes for project management, work-flow management, time sheet management, bug tracking, milestone tracking, project execution and reporting and Client communication. **Promatics** is currently ISO 9001:2008 quality certified.

|| Warranty Period and Maintenance ||

Promatics shall give a warranty for all its code, provided a third party does not alter the same. Any changes or bugs shall be addressed absolutely free of cost until it does not involve adding new modules which will be billable. Warranty shall be valid only after clearance of full and final payment of the project for a period of **3 Months**.

|| Terms and Conditions ||

- i. Deliverables listed in the proposal above will be referred to during the development of the project. Any new features, additional modules, major changes in work flow or any other element which is out of scope as per the above will attract a fresh ETA and quote which will be submitted separately by Promatics.
- ii. All content, images, texts, videos, Third party integration, services, API, Plug-in etc. information will be provided by the Client. If any of those attracts any cost to be acquired, same will be borne by the Client.
- iii. Promatics is not liable to write or publish the content on the project.
- iv. Promatics is not responsible for the delay of the project if the necessary information required by the Client like API's information, third party plug-ins, Payment gateways and shipping gateways info etc. is not provided timely by the Client.
- v. Promatics will provide design concepts as per the client's request for
 Design work and there will be revisions which can be done as per Client's
 remarks.
- vi. Promatics is not responsible for the delay caused by the malfunctioning of any third party software integrated with the project.
- vii. General features not described in detail will carry out as per industry standards and will be supported by open source scripts like for Google Ad Management, Email Management, Content Management, Newsletter Campaigns and Other features like live support chat like Tawk.to.
- viii. Domain Registration & Hosting Server for the installation of final product will be bought by the Client and provided to Promatics.
- ix. Client will ensure that the hosting server provided is compliant to the requirements for hosting server provided by Promatics.

Shreshth Agarwal Page 52 of 55

- x. The quote is valid for 30 days from the date of receiving the Proposal.
- xi. The onus of delay in project delivery will rest on the client in case the client: a) does not reply to all communication sent by Promatics within 48 business hours max b.) goes on a long period of absence c.) deviates from the agreed scope of work in form of change request or additional features.
- xii. All source code will be handed over to the client or shifted to client servers after full and final payment to Promatics.
- xiii. If any portion of the payment is received by Promatics after the payment due date as set forth above, or if any portion of the payment is received by Promatics in funds that are not immediately available, then a late payment penalty shall be due to Promatics. The late payment penalty shall be the portion of the payment not received by the payment due date multiplied by a late factor. The penalty will not levied in case there is delay from Promatics in the project.
- xiv. If a client provides a server from AWS, one should make sure we have root credentials not IAM users. If a client provides a cpanel then should make sure we have a dedicated server not the shared server. Shared server is fine if we only have a website and admin not the mobile apps.
- xv. Domain is necessary to make the website/app live, only we need DNS management access of the domain. It is always preferred not ask to make project live on IP address.
- xvi. SSL certificates are also important to deploy the project on live server. There are two types of SSL certificates: free and paid. Kindly confirm it from the client side which SSL they want to use on their server as free SSL certificates are not secure as much. Kindly do not ask developers or Network Administrator to use free SSL certificates from your end, it is preferred to first ask the clients which they want to use.

xvii. If any project only have admin panel and mobile apps but not the website then we need to make static landing page with terms and conditions as it is mandatory when we make apps live on their platforms.

|| Proposed Team for the Project ||

The proposed team to achieve the deliverables in a time span of 16 business weeks comprising of 40 hrs / week is as follows

Junior Programmers	3	Full-Time
Senior Programmers	2	Full-Time
Testing / QA Engineer / Analyst	1	Part-Time
Project Manager	1	<mark>Full</mark> -Time
UI/UX Designer	1	Part-Time

| Payment Schedule |

Top

	Amount (INR)	Percentage	Milestones (Delivery Schedule)	Time
1)	2,40,000	25%	Upon Initiation	Signing of contract
2)	2,40,000	25%	1 st & 2 nd Modules	5 Weeks from start
3)	2,40,000	25%	3 rd Modules	10 Weeks from start
4)	2,40,000	25%	4 th & 5 th Modules	16 Weeks from start

^{*}Client will release the payment after the milestones have been completely tested on Promatics' test servers.

Promatics would provide web application design and development to Client for INR 9,60,000 +GST.

Shreshth Agarwal

Page 54 of 55

Please Note The Following:

1. If you wish to automate the verification process for image and video posts related to real estate, we suggest integrating the GPT-4 API with Azure Visual. Please note that the client must provide both the API and an Azure account for this integration. This additional implementation will require an extra 4 business weeks and will incur a cost of INR 3,60,000 +GST.

2. If you want both the web application and the hybrid mobile applications for Android and iOS devices, then that will take a total of **18 weeks** of E.T.A., a cost total of **INR 14,40,000** +**GST**. Please note that this does not include AI implementation. The extra cost for AI integration remains fixed as aforementioned.
